

Target Stand From PVC

Base Assembly. make from 5' of 2" PVC, and 4 T's

Assembly Tips:

Typically, PVC tubing is glued together which makes a very good target stand. However it also makes the target stand very hard to repair. An alternative is to press the PVC fittings and pipe together and fasten the joints with #8 x 1/2" metal screws. If a repair is needed, an new part can be substituted for the broken one in a few minutes. A supply of fittings and pipe, a screw driver and a small hand saw is all that is needed to make repairs at the range.
